statistical mechanics as a form of statistical inference rather than as a physical theory, it is found that the usual computational rules, starting with the determination of the partition function, are an immediate consequence of the maximum-entropy principle In the resulting "subjective statistical mechanics," the ...

regardless of the statistical inference problem at hand, the first step of a statistical analysis is to produce some summary of the information in the data about the unknown parameter² Such summaries are called statistics, and Section 14 gives an introduction Once a summary

Intro to Decision Theory - Statistical Science

Frequentists have a few answers for deciding which is better: 1 Restricted classes of procedure I We could force $E[\hat{\theta}] = \theta$ for all (unbiased) I Suppose we only look at unbiased estimators I Then we can often reduce the situation to only risk curves like 1 and 2 in Figure 1, eliminating overlapping curves like 3 I Existence of an optimal unbiased procedure is a nice
